metrics that matter connect

# Connect learning data with business outcomes.

The need for corporate HR and L&D leaders to demonstrate business impact is more critical than ever. With the MTM Connect API, you can now combine your learning event response data from Metrics That Matter (feedback collected from employees on the impact of your classes and conferences) with other business data for more in-depth, meaningful analysis.

MTM Connect data flow

01

MTM exposes data thru MTM Connect

02

Customer retrieves data from MTM Connect and stores in data warehouse

03

MTM data and other datasets are combined in data warehouse

04

Customer conducts analysis of MTM + business data
Own your learning data.

As your organization's needs evolve, access to all your data becomes a necessity. MTM Connect allows you to export and store your class and conference data offline and combine it with other datasets. Combining your learning performance with other business data helps identify new insights, trends, and root causes which are impacting your training and business performance.

Reveal L&D's business impact.

Get a full view of the employee journey, and help focus your efforts on those areas with the most value. With the MTM Connect API, you can quickly gather insights from your learning data and understand its connections to business outcomes.

Breakdown data siloes.

Without the ability to instantly access and control all your data, you fall behind those who can, especially if your data is siloed in disparate sources. If it takes a considerable amount of time to answer questions imperative to your business performance and growth, it's time to consider MTM Connect.

metrics
that matter

Offering a better way to interact with learning data, MTM Connect is built to compliment Metric That Matter's world-class L&D reporting suite, which includes:

- Modern navigation menu
- Easy access homepage
- Ready Reports
- Centralized reports and dashboards
- Data Explorer
- Key driver recommendations

Get started with MTM Connect now.
